Detailed Action

1. This action is in response to the application filed 07/16/01.
2. Claims 1 – 12 are pending.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. Claims 1 – 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Killian et al. USPN. 6,760,888 (hereinafter "Killian").

Regarding claims 1 & 5, Killian anticipates a digital signal processing apparatus, comprising:

a plurality of digital signal processing blocks and a host arithmetic operation processing block as functions necessary for processing a digital signal (FIG. 2, 66, see ALU);

a bus for connecting said host arithmetic operation processing block and said plurality of digital signal processing blocks (FIG 10, see Bus A, and Bus B); and

an interface for an extension function providing medium connected to said bus, wherein the extension function providing medium has: means for accomplishing an extension function (4:47 – 60, see custom interface and instruction set extensions); and

a script embedding a command for operating the extension function, and wherein when the extension function providing medium is attached to said bus through said interface, the script is sent to said host arithmetic operation processing block side and a function of the extension function providing medium is operated corresponding to the command embedded in the script (23:50 – 52, see scripts).

Regarding claims 2 & 6, the digital signal processing apparatus as set forth in claim 1, wherein each of said plurality of digital signal processing blocks includes means for interpreting a command received through said bus and executing the command (8:32 – 34, see interpret).

Regarding claims 3 & 7, the digital signal processing apparatus as set forth in claim 1, wherein the command is a high layer command that does not depend on hardware and that is not on real time basis (10:15 – 20).

Regarding claims 4 & 8, the digital signal processing apparatus as set forth in claim 1, wherein the command is described and embedded in a script of hypertext, wherein the hypertext is interpreted by a browser and a picture for operating the extension function is displayed, and wherein a command corresponding to the function is embedded and displayed in the picture for operating the extension function (10:60 – 67).

Regarding claim 9, which is the method version of claim 1, see rationale above as previously discussed, regarding method see (97:1 – 98:30).

Regarding claim 10, which is the method version of claim 2, see rationale above as previously discussed, regarding method see (97:1 – 98:30).

Regarding claim 11, which is the method version of claim 3, see rationale above as previously discussed, regarding method see (97:1 – 98:30).

Regarding claim 12, which is the method version of claim 4, see rationale above as previously discussed, regarding method see (97:1 – 98:30).
